
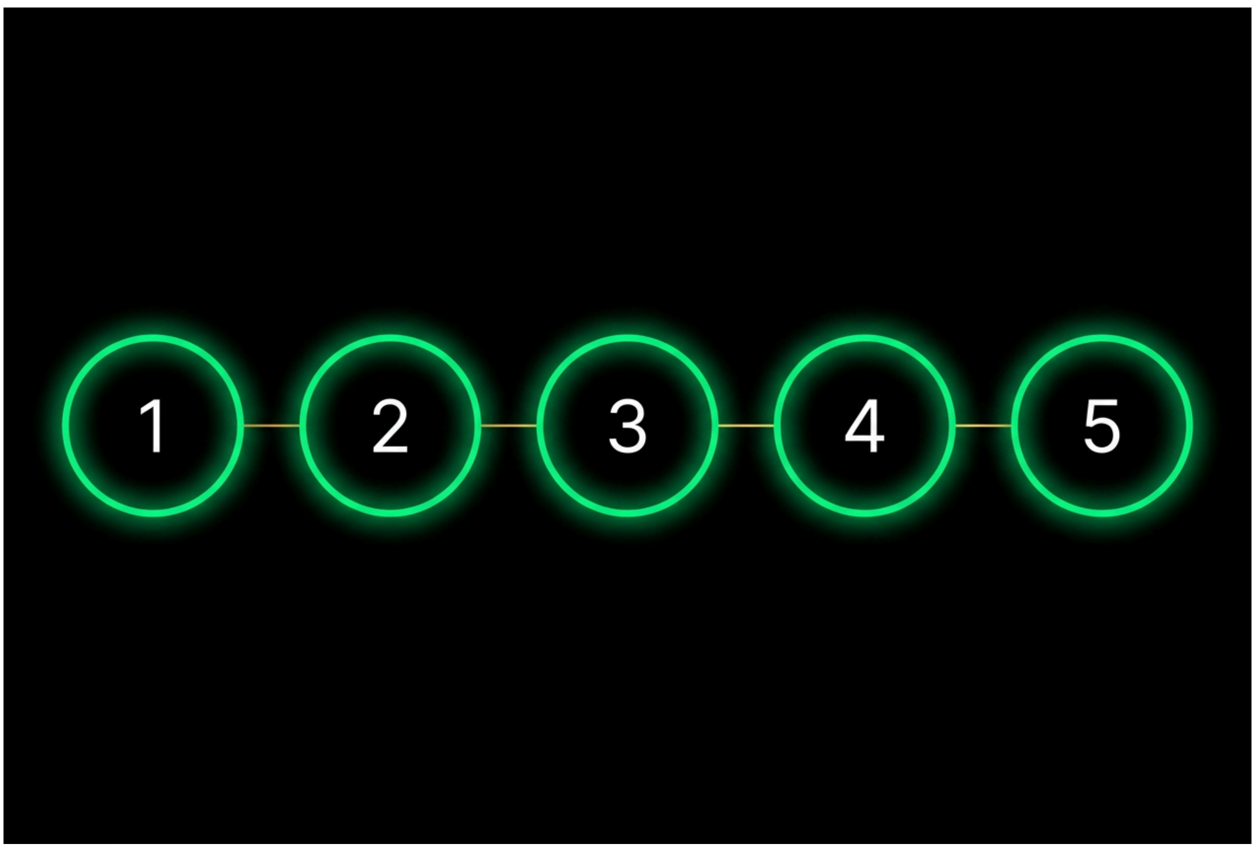
THE GREEN LIGHT SPECIAL
REAL MONEY PLAYBOOK

THE REAL MONEY PLAYBOOK

HOW TO USE THE GREEN LIGHT SPECIAL 🟢 — MADE SUPER SIMPLE

> **Read this first.** This tool will not win every trade. Nobody can. But here is the secret: you make money by doing 3 easy things. **Only trade when the lights say go. Take small losses. Let your wins get big. And stop when you are up for the day.** This tool helps you do all 3. Do what it says and you give yourself the best shot over time.



THE WHOLE THING IN 5 STEPS

Every trade is the same 5 steps. Learn these and you know the system:

> ### 1. WHICH WAY → 2. GET READY → 3. GO IN → 4. HOLD → 5. GET OUT

1. **Which way** is the market going? Up or down?
2. **Get ready** — a good trade is coming.
3. **Go in** — the green light says buy or sell now.
4. **Hold** — stay in and let it grow.
5. **Get out** — take your money. Stop for the day.

That’s it. The rest of this book just shows you how.

STEP 1 — WHAT TO TRADE

This tool is built for FUTURES. That is what it does best. Futures move a lot at the open and show real buying and selling, so every signal is sharp. **Trade futures first.**

🏆 THE 4 BEST — FUTURES (THIS IS YOUR MAIN THING)

Name	What to type	When it's best
S&P 500	**ES** (or MES for small money)	9:30 in the morning (NY time)
Nasdaq	**NQ** (or MNQ for small money)	9:30 in the morning
Dow	**YM** (or MYM for small money)	9:30 in the morning
Gold	**GC** (or MGC for small money)	8:00 in the morning

These 4 futures are the best markets for this tool. They move a lot. Lots of people trade them. The tool sees the **real** buying and selling, so the green lights are clean and true. **If you only ever trade these 4, you have everything you need.**

> 💡 **Small account or a funded challenge?** Trade the little ones: **MES, MNQ, MYM, MGC.** Same exact trades. Way less money at risk. **This is the best place to start.**

WHY FUTURES WIN

The tool's magic is the **volume** — it watches how many people are really buying and selling. Futures show the **real** number from the exchange. So the tool sees the truth. That is why futures give the sharpest, most honest signals. **Stick with ES, NQ, YM, and Gold.**

FOREX (ONLY IF YOU WANT EXTRA — FUTURES COME FIRST)

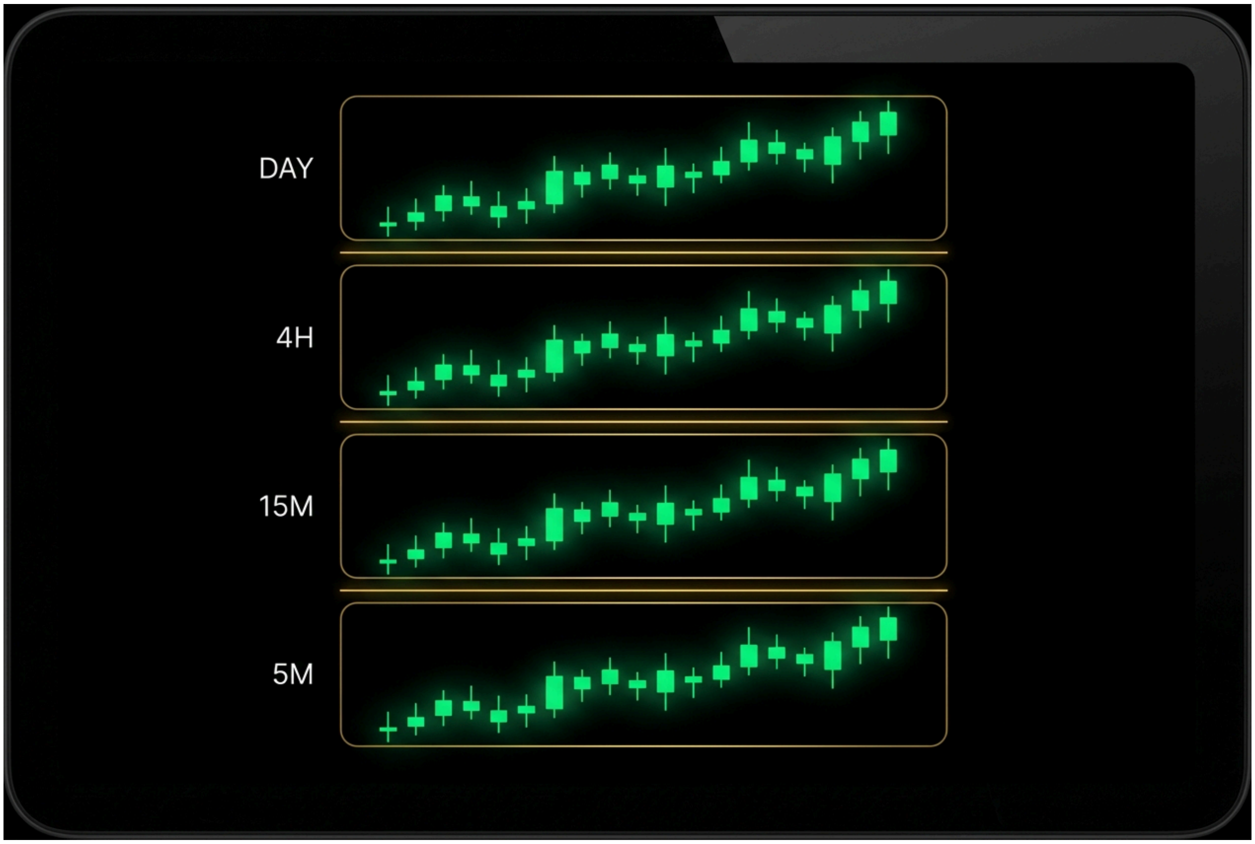
Forex works too, but it is a **side option**, not the main event. Trade it at the **London open (3:00 AM NY)** or **New York open (8:00 AM NY).** Best pairs: **EUR/USD** (easiest), **GBP/USD** (bigger moves), **USD/JPY** (smooth), **GBP/JPY** (wild), **AUD/USD**.

> **The catch:** forex does not show real volume like futures do. So the tool's best trick (the volume filter) is weaker there. On forex, watch the price and the **yellow average-price line (the VWAP — it shows the day's fair price)** more. **This is why futures are better. Trade futures.**

DON'T TRADE

Small, slow, dead stuff. Weird coins. Quiet night hours. If nothing is moving, there is no trade.

Best tip: pick **ONE** future and trade only that. Most beginners do great with **MNQ** or **MYM**. Learn one market well. That beats guessing at five.



STEP 2 — SET YOUR CHART

Look at the **bottom-left box** on your chart. It shows **4 clocks:** Day, 4h, 15m, 5m. Each one says UP or DOWN. *(The box in the top-right corner is a different one — that's the Scalper's info panel.)*

The rule is easy:

- All 4 say **UP** → it is a **buy day.** Only look to buy.
- All 4 say **DOWN** → it is a **sell day.** Only look to sell.

- **Mixed** (some up, some down) → **do not trade.** Wait.

> 💡 Mixed days are traps. The tool says "WAIT" so you don't lose money. That boring "wait" saves your account.

⏰ TWO CHARTS, TWO JOBS (THIS IS IMPORTANT — DON'T SKIP IT)

Different trades work best on different charts. It's easy:

For this trade	Use this chart
The Opening trade (the big morning one)	**15-minute** (10 or 30 also work)
All day — the scalper and dip trades	**5-minute**

So: start your morning on the **15-minute** to catch the opening. After the open, drop to the **5-minute** for the rest of the day. Same tool. Same market. You just change the timeframe. That's it.

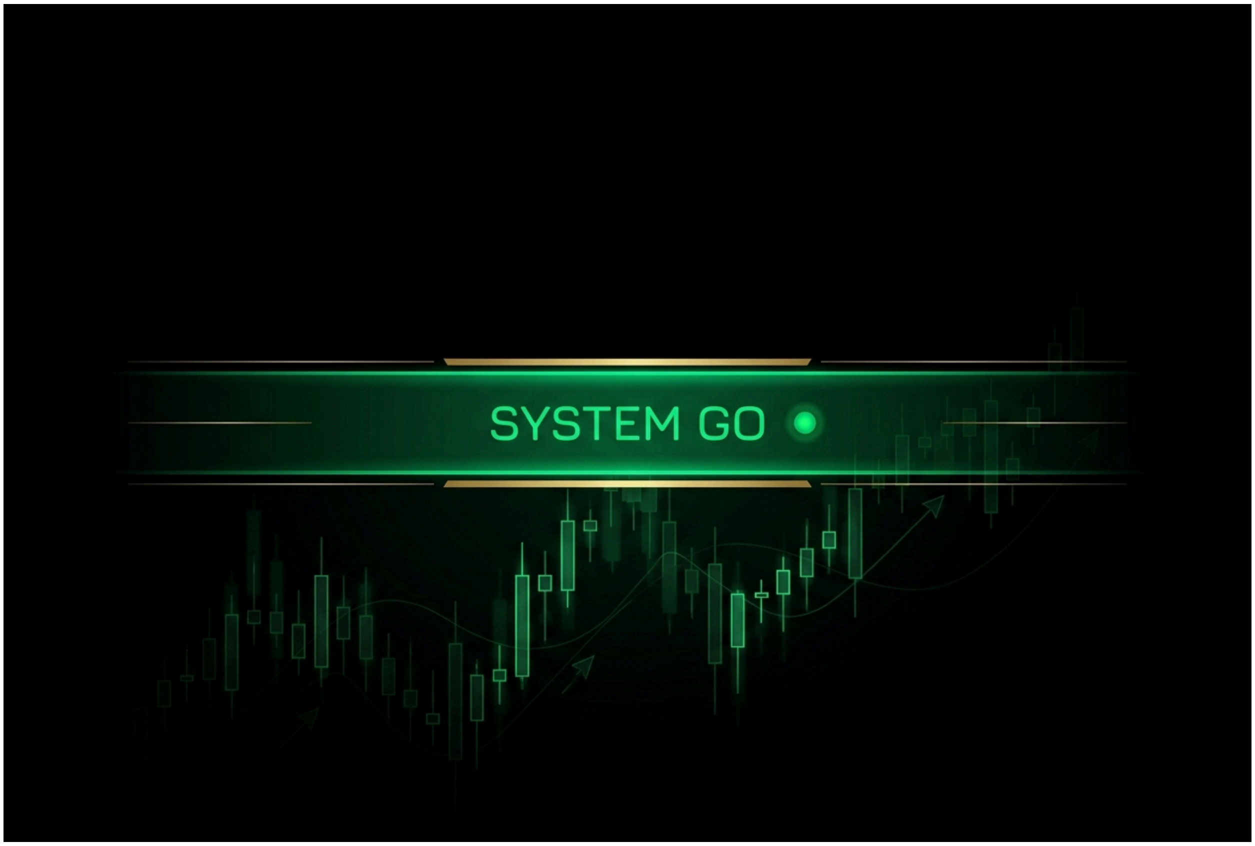
> For the all-day trades (scalper, boxes, dips, switches), **5-minute or 15-minute both work.** 5-minute gives you more trades, 15-minute gives you cleaner ones. Pick one and stick with it.

WHAT "STYLE" TO PICK

Go to Settings and pick your style. This sets how long you hold:

Your style	Best for
Day Trading (start here)	in and out, same day
1-Hour Swing	holding a few hours (use a 1-hour chart)
Multi-Day Swing	holding for days (use a 4-hour or Daily chart)

> ⚠️ If you pick "Multi-Day Swing" but stay on a small chart, the screen looks empty. That's not broken. The chart just has to match the style. **Most people: Day Trading, and swap between the 15-minute and 5-minute like the box above says.**



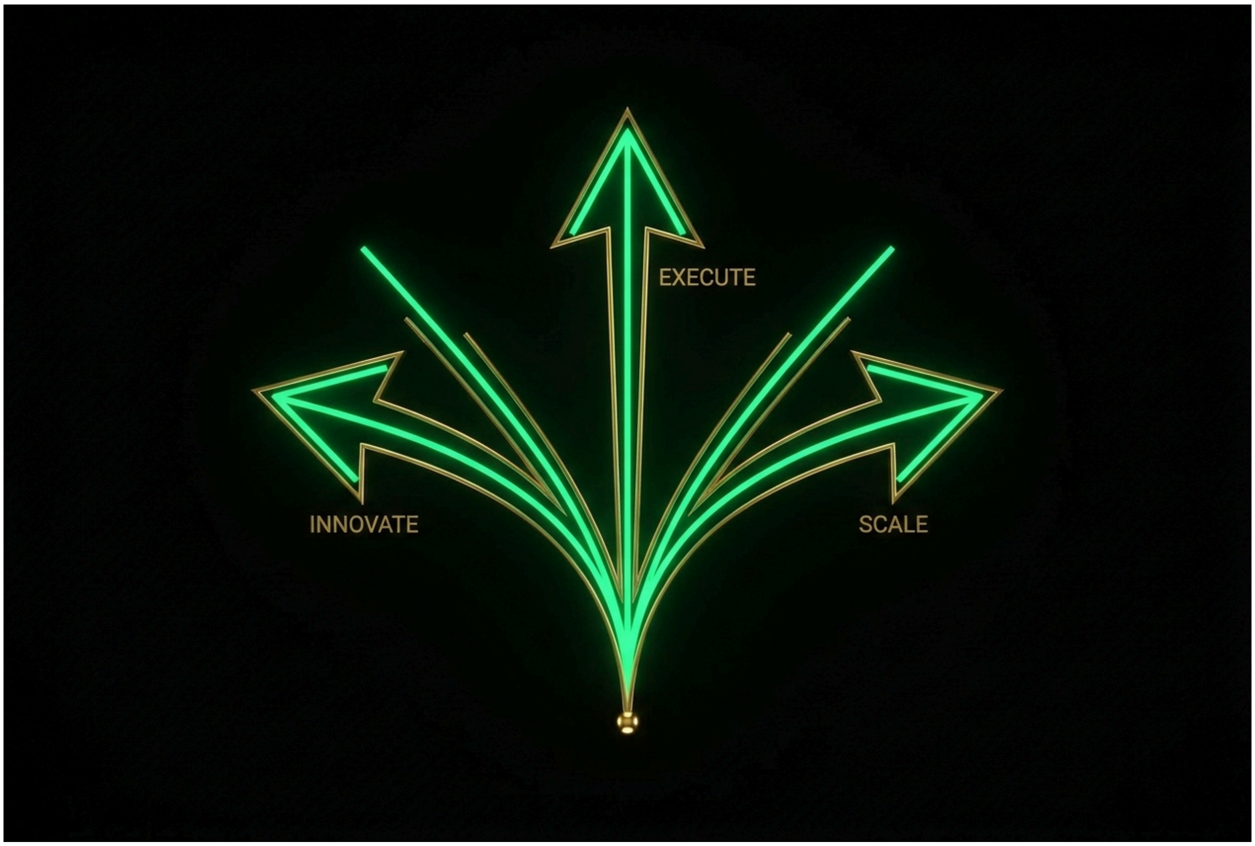
STEP 3 — READ THE BANNER

The tool talks to you in plain words in the middle of the screen. Just read it and do what it says.

It says	What it means	You do
🔮 **GET READY**	a trade is coming	watch, don't touch
🟢 **SYSTEM GO**	all set, go now	**buy or sell**
🟢 **RIDE IT**	you are in	hold on
🚀 **RUNNER**	you are winning big	let it keep going
🛑 **STAND DOWN**	you're done for the day	close the laptop
🟡 **STAND ASIDE / WAIT**	no good trade right now	wait

That's the whole job. Read the words. Do what they say. It only says "GO" when the setup meets the rules — but remember, **no signal wins every time.** Some will still lose, and that's normal.

> **Note:** no matter which trade you take, you manage it the same easy way — keep your **dotted stop**, and take money at the **gold dot** (both coming up next).

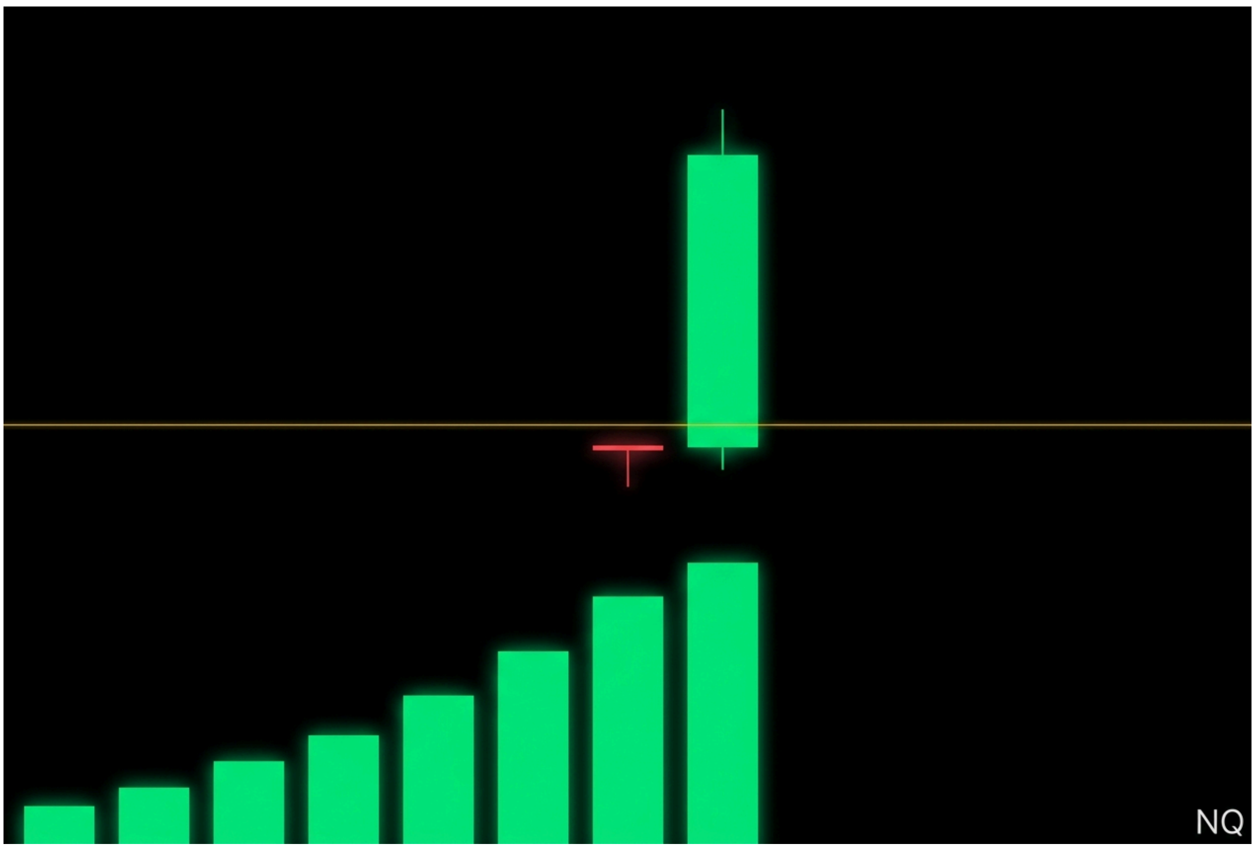


STEP 4 — THE WAYS TO WIN

There are **5 main ways** to win, plus a bonus. **You do not need all of them.** Pick ONE. Get good at it. Then add another. Every way only trades **with the 4 clocks** — never against them.

Here they are at a glance:

Way	Name	Best chart
1	The Open (🔔 OPENING GO)	15-minute
2	The Scalper (⚡ Breakaway)	5-minute
3	The Get-In Box (📦 FVG)	5 or 15-minute
4	The A1 Dip (⭐ A1 gold box)	15-minute (or 5)
5	The Switch (↑ / ↓ SWITCH)	15-minute (or 5)
Bonus	The Simple ORB (🚀)	15-minute



💰 WAY 1 — THE OPEN (THE BIG ONE)

The first **90 minutes** after the market opens is the best time to trade. But it's tricky. The market often fakes one way first to trick people. Then it goes the real way.

The tool waits out the trick and catches the real move. Here's what you do:

1. **Don’t trade the first 15 minutes.** Just watch. *(The tool measures those first 15 minutes to draw its range. Don’t confuse that with the 90-minute window — one is the range it measures, one is the best time to trade.)*
2. The tool waits for a real move (a strong candle, with lots of buying/selling).
3. When it’s real → it says 🔔 **OPENING GO — BUY** (or SELL). It draws your stop line for you.
4. If it’s a fake → **nothing happens.** The screen stays quiet.

> **The trick:** a fake move pokes out and comes right back. A real move is a big strong candle that stays. The tool only calls the real one. **If it’s quiet, there is no trade. That’s good.**

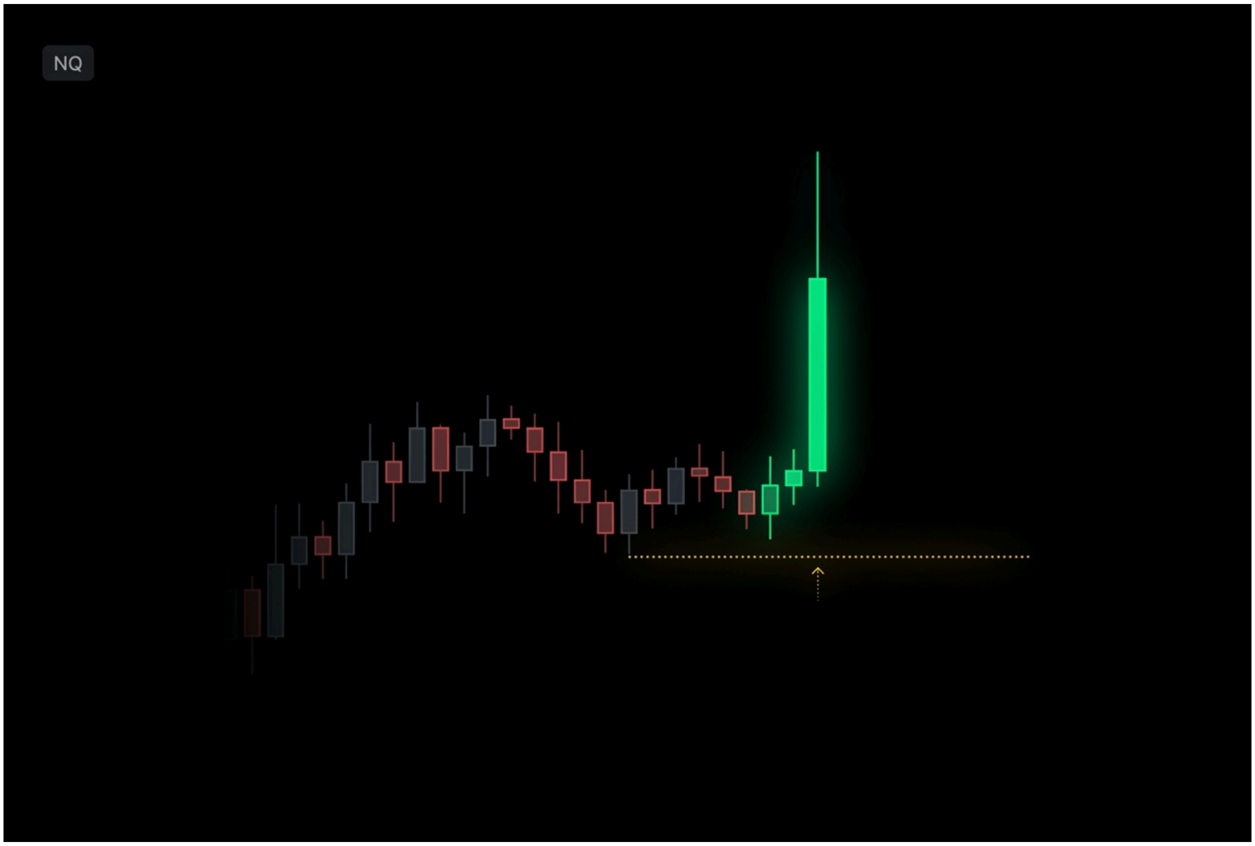
⏰ BEST CHARTS FOR THE OPENING GO

The 🔔 OPENING GO shows up best on the **10-minute, 15-minute, and 30-minute** charts.

- **15-minute = the sweet spot.** It matches the tool’s opening range. **Use this one first.**
- **10-minute** = gets you in a touch sooner.
- **30-minute** = slower and steadier, fewer fakes.

How to trade it: put your chart on the **15-minute.** Let the first candle build. When 🔔 **OPENING GO** prints, take it on the close of that candle. Stop on the dotted line. One clean trade.

> **Note — two modes.** In Settings, the Opening has a switch called “How it calls direction.” Leave it on **”Volume Breakout”** (go WITH the real move). The other choice, “Sweep-Reclaim Fade,” flips it to bet the *other* way — only for advanced users. **Beginners: leave it on Volume Breakout.**



💰 WAY 2 — THE SCALPER (QUICK TRADES, ALL DAY)

This one is **already on.** When price gets tight and squeezed, then pops out, the tool tells you to place an order at a good price. On the chart you'll see a **Limit Buy** or **Limit Sell** box and a line — that line is your price.

- **BUY** → price popped up. Place a buy at the line. Buy the little dip back.
- **SELL** → price popped down. Place a sell at the line. Sell the little bounce up.

You place a **limit order** at that line, so you get a good price instead of chasing. When it fills you'll see "Long Filled" / "SHOTS FIRED."

⏰ BEST TIMEFRAME FOR THE SCALPER

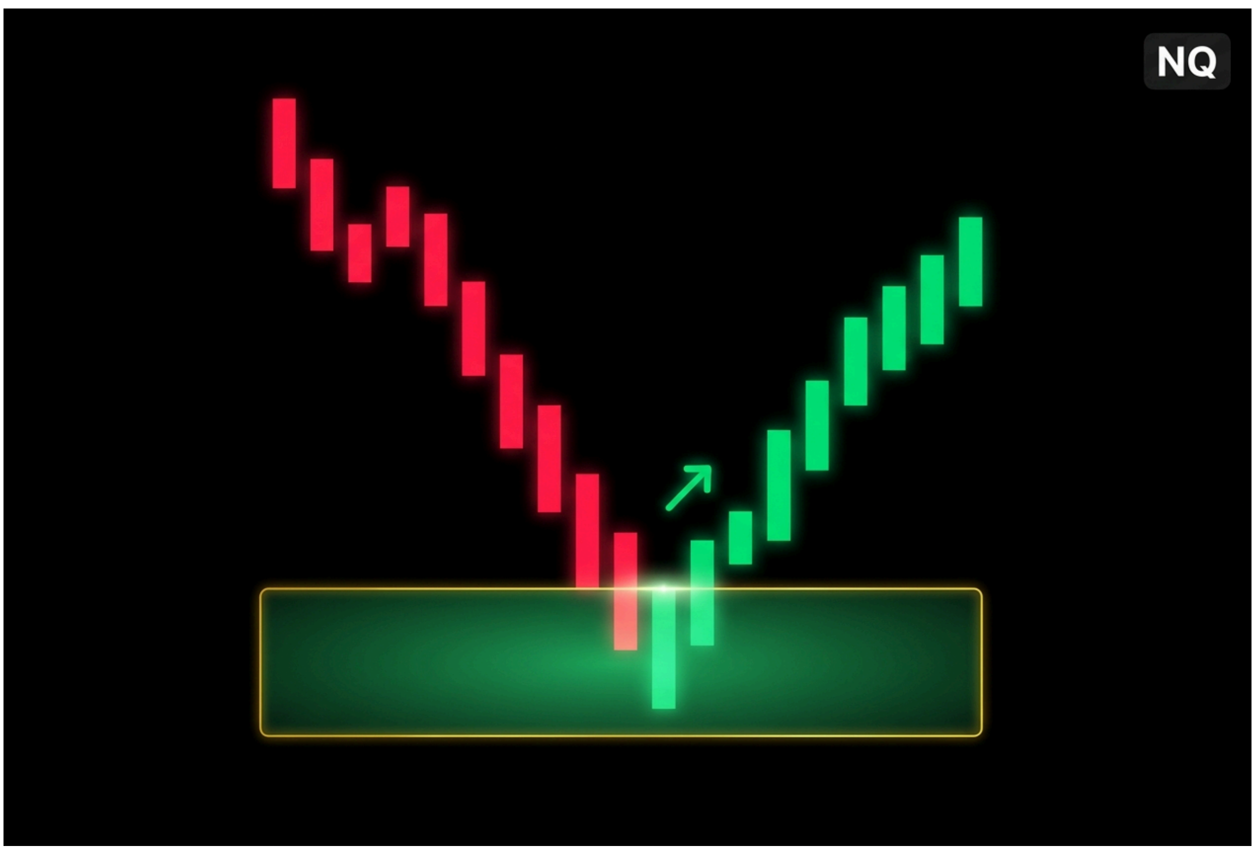
The scalper works best on the **5-minute chart.** It runs all day. This is your main all-day trade after the open.

HOW TO TRADE IT (STEP BY STEP)

1. Stay on the **5-minute chart**, with the trend (the 4 clocks agree).
2. Wait for price to get tight and squeezed, then pop out.
3. The tool shows a **Limit Buy / Limit Sell** line. Place your limit order right there.
4. **Buy** → buy the little dip back. **Sell** → sell the little bounce.
5. **Stop:** the line the tool draws. **First target:** the 🎯 line. Take half, then ride the 🏄 8-EMA.

Best settings for the scalper *(most come already set — but check Max range height):*

- Chart on **5-minute**
- **Strong-trend only: ON** (already on)
- **Scalp with intraday trend: OFF** (already off)
- **Max range height: change it from 4 to 2** (only tight, clean squeezes)
- **Catch-the-runner: OFF** (already off)



💰 WAY 3 — THE GET-IN BOX (THE CORE TRADE)

This is the trade the tool is built around. You will see it a lot, so learn it well.

When price moves fast, it leaves a little **gap** — a spot it skipped over. (Traders call this an **FVG**, a "fair value gap" — that's all FVG means.) Price likes to come back and "fill" that gap before it keeps going. The tool draws a **green box** (for buys) or **red box** (for sells) on that gap. That box is your **GET-IN spot.**

⏰ BEST TIMEFRAMES FOR THE GET-IN BOX

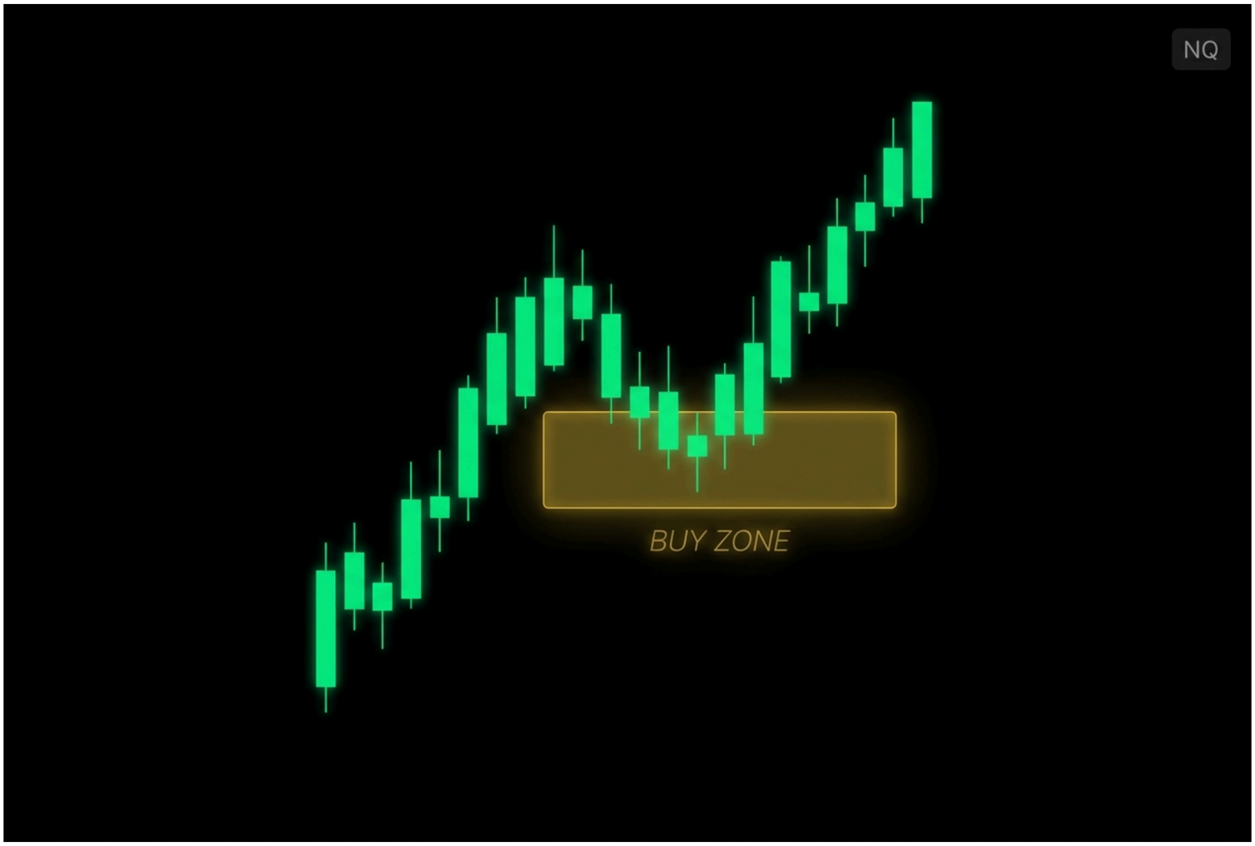
The GET-IN box works on the **5-minute and 15-minute** charts.

- **5-minute** = you get **lots** of boxes all day. Best for active trading. This is the main one for the all-day part of your session.
- **15-minute** = fewer boxes, but **bigger and cleaner.** Best if you want fewer, stronger trades.
- Use it on whatever chart you're already on for the day.

HOW TO TRADE IT (STEP BY STEP)

1. Check the **4 clocks** agree (up for a green box, down for a red box). No trend = skip it.
2. A **green box** shows up under price in an up-trend (or a red box above price in a down-trend).
3. Wait for price to come back and touch the box. The tool says ✅ **FILLED — GET IN.**
4. **Enter there.** You got a great price — right where big money steps in.
5. **Stop:** the dotted 🛑 line the tool draws (just past the box).
6. **First target:** the 🎯 line the tool draws. Take half, then ride the trend with the 🏄 8-EMA for more.

> Only take the box that goes **with the 4 clocks.** If a box breaks and fails, the tool grays it out — skip gray boxes. (The tool only draws boxes that go with the trend, so you won't get bad-direction ones unless you turn on the extra "show ignored zones" switch.)



💰 WAY 4 — THE A1 DIP (BUY THE DIP IN THE GOLD BOX)

This is the ⭐ **A1 trade** — one of the best setups in the whole tool. “A1” just means **A-plus, top grade.** When the trend is strong and price dips back a little, it often stops in a special spot called the **golden pocket** — the tool draws it as a **gold box.** Buying the dip there means you join a strong trend at a **discount price.**

Why it’s so good: you’re not guessing. You wait for a strong trend, wait for the dip into the gold box, and wait for the tool to say the dip is done. Three green lights before you risk a dime.

⏰ BEST TIMEFRAMES FOR THE A1 DIP

The A1 works best on the **5-minute and 15-minute** charts.

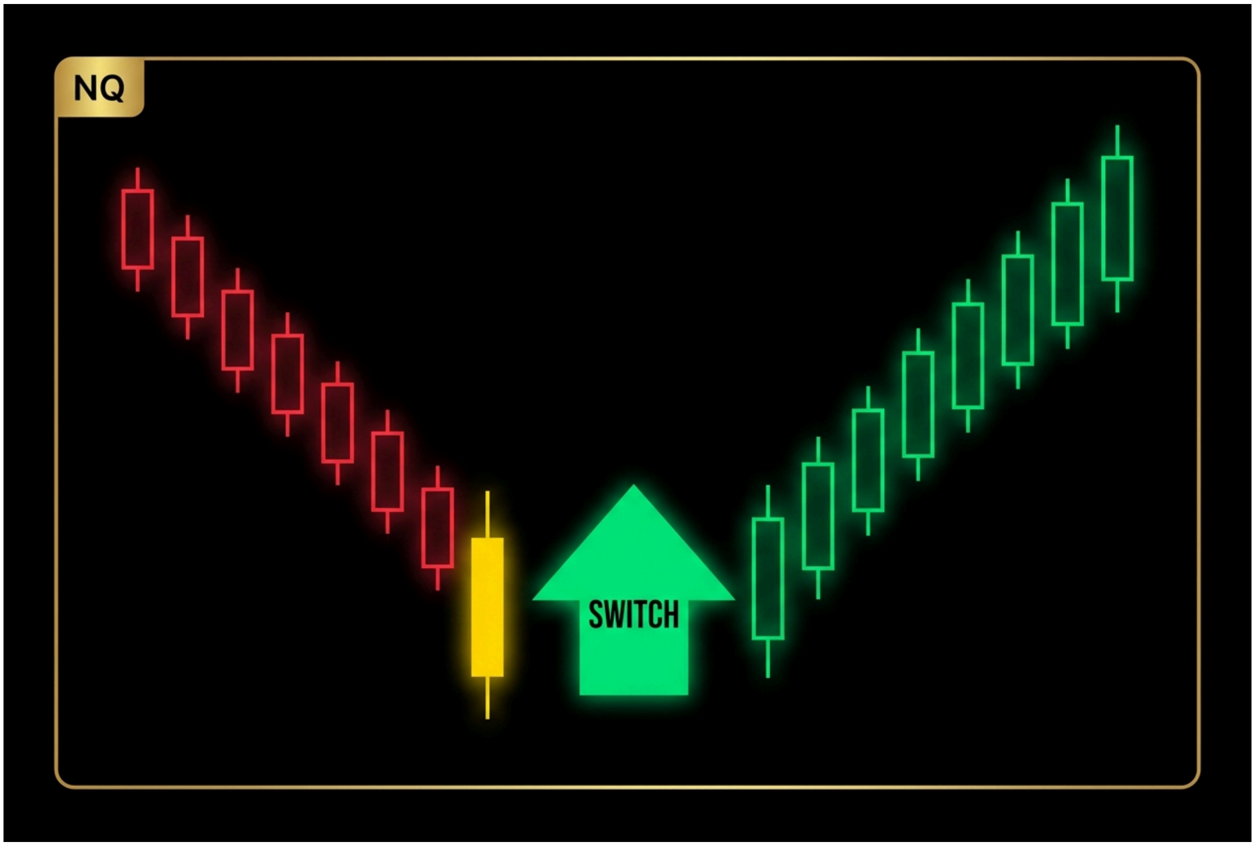
- **15-minute** = the **best** one. The gold box is bigger and cleaner. Fewer, stronger A1 trades. **Start here.**
- **5-minute** = more A1 trades, a bit smaller. Good once you know the setup.

- Keep it on the same chart you're already using for the day.

HOW TO TRADE THE A1 DIP (STEP BY STEP)

1. **Check the trend.** The 4 clocks must agree (all up for a buy, all down for a sell). No trend = no A1.
2. Price **dips back** into the **gold box** (the golden pocket). The banner says **GET READY.**
3. A 🎯 **shaded band** shows up — that's the exact "get-in zone" to watch.
4. **Wait for the ⭐ star (⭐ A1).** The tool needs a strong candle to close back the right way first. The star means "the dip is done, go now." **Do NOT buy just because price touched the box — wait for the star.**
5. **Get in** when the ⭐ A1 prints.
6. **Stop:** just past the far side of the gold box.
7. **First target:** the last high (for a buy) or last low (for a sell). Take half. Then ride the trend with the 🏄 8-EMA line.

> This only works **with the trend.** The tool skips dips that go against the trend — those are traps. The ⭐ A1 star is your proof the dip is really over.



💰 WAY 5 — THE SWITCH (CATCH THE TURN)

Sometimes the trend flips. Down turns into up. Up turns into down. The Switch trade catches that turn early, so you're in before the crowd. The tool warns you first, then tells you when the flip is real.

The two steps of a Switch:

1. First you see a 🟡 **Yellow Man** — a yellow candle. That's a **warning:** the trend might be turning. *(This is NOT a trade yet. Just get ready and watch.)*
2. Then, when the turn is real, a big arrow prints: ↑ **SWITCH** (turned up) or ↓ **SWITCH** (turned down). **That arrow is your green light.**

⏰ BEST TIMEFRAMES FOR THE SWITCH

The Switch works best on the **5-minute and 15-minute** charts.

- **5-minute** = catches the turn **fast** — best for quick reversal scalps. More signals, a little more noise.

- **15-minute** = **cleaner, bigger** turns. Fewer signals, but stronger ones. Best if you want to hold longer.
- **Don't use it below the 5-minute** — a 1-minute chart flips too much and fakes you out.

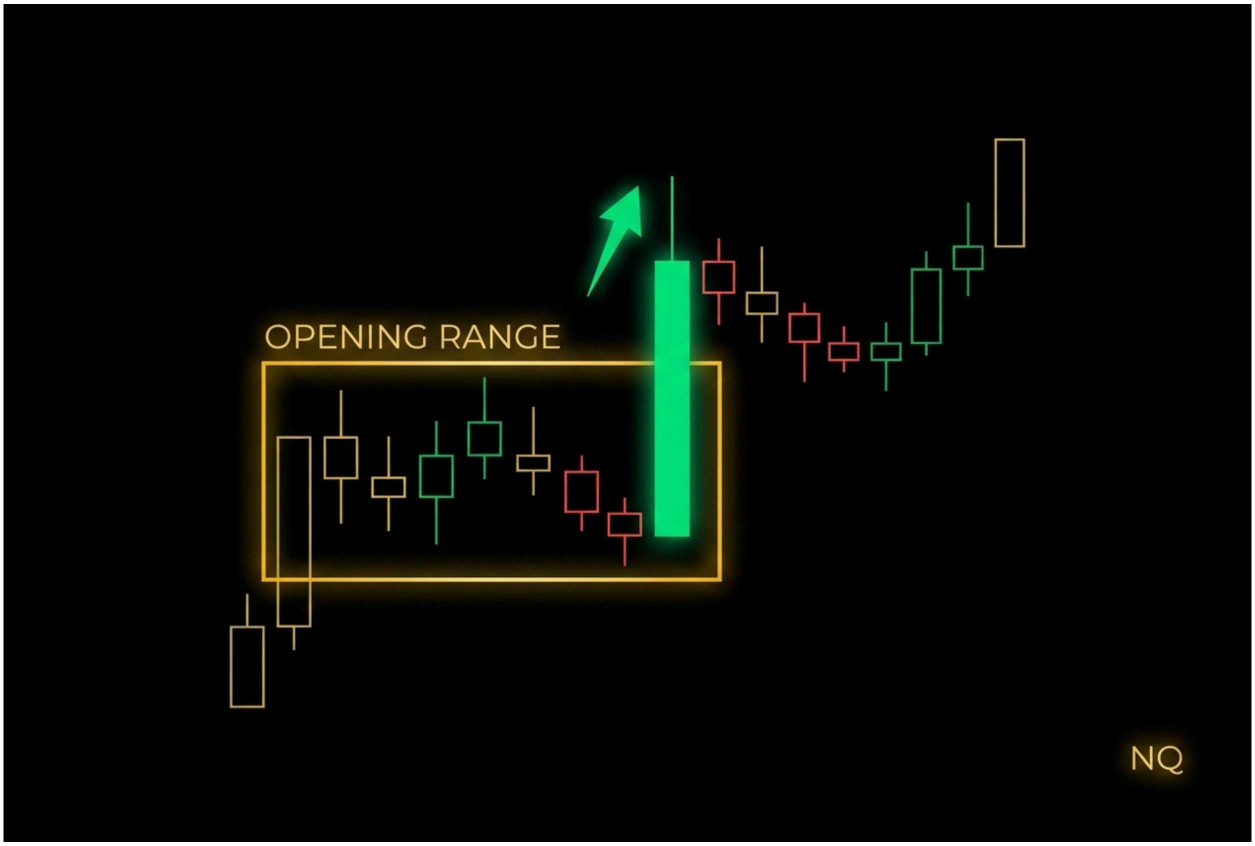
> **Simple:** use the **5-minute** for a quick catch, the **15-minute** for a bigger, safer turn. Beginners: start on the **15-minute** — the Switches there are the trustworthy ones.

HOW TO TRADE THE SWITCH (STEP BY STEP)

1. Wait for the 🟡 **Yellow Man** warning. Get ready. Don't trade yet.
2. Wait for the ↑ **SWITCH** (to buy) or ↓ **SWITCH** (to sell) arrow. This is your go.
3. **Get in** on the **close** of the switch candle.
4. **Stop:** just under the **low** of the switch candle (for a buy) — or just over the **high** (for a sell).
5. **First target:** the last swing high (for a buy) or last swing low (for a sell). Take half there.
6. **Then ride** the new trend with the 🏄 8-EMA line. Stay in while price holds it.

> ⭐ **Extra-strong version:** if a **star** shows up on a GET-IN box right after a SWITCH, that's a reversal *and* a get-in box lining up. Those are the best turn trades — you can trust them more and even size up a little.

> **Important:** the Switch goes **quiet during the opening window** (the first ~45 minutes) on purpose, so it doesn't fight the 🔔 Opening call. **In the morning, the Opening trade is the boss.** The Switch takes over later in the day. So: trade the 🔔 Opening at the open, then watch for Switches the rest of the session.



🚀 BONUS — THE SIMPLE ORB

Way 1 (The Open) is the smart version. But if you want the plain, old-school open trade, the tool has it too. It's **off** to start.

Turn it on: Settings → ORB → flip **Opening-Range Breakout: ON.** ⚠️ **Important:** you also have to turn the **Scalper OFF** — if the Scalper is on, the ORB stays hidden.

How to trade it:

1. When the market opens, the tool draws a box around the first 15 minutes (the high and low).
2. **Wait.** Don't trade inside the box.
3. A candle **closes above the box** → **buy.** A candle **closes below** → **sell.**
4. **Stop:** the other side of the box.
5. **Target:** as far as the box is tall, once or twice. Or ride it if it runs.

> **Be honest:** this plain version gives more trades, but more of them are fakes. That's why Way 1 is smarter. **Trade Way 1 first.** Use the plain ORB later, once you can spot a fake.

WHICH SWITCH TURNS ON WHICH WAY

So you're never lost in the Settings menu:

Way	Switch name in Settings	On to start?
Way 1 — The Open	🔔 **Opening**	✅ ON
Way 2 — The Scalper	⚡ **Breakaway Scalper**	✅ ON
Way 3 — The Get-In Box	📦 **GET IN boxes**	✅ ON
Way 4 — The A1 Dip	⭐ **A+ Setup**	✅ ON
Way 5 — The Switch	🟢 **Reversal-switch arrows**	✅ ON
Bonus — The Simple ORB	🚀 **Opening-Range Breakout**	❌ OFF

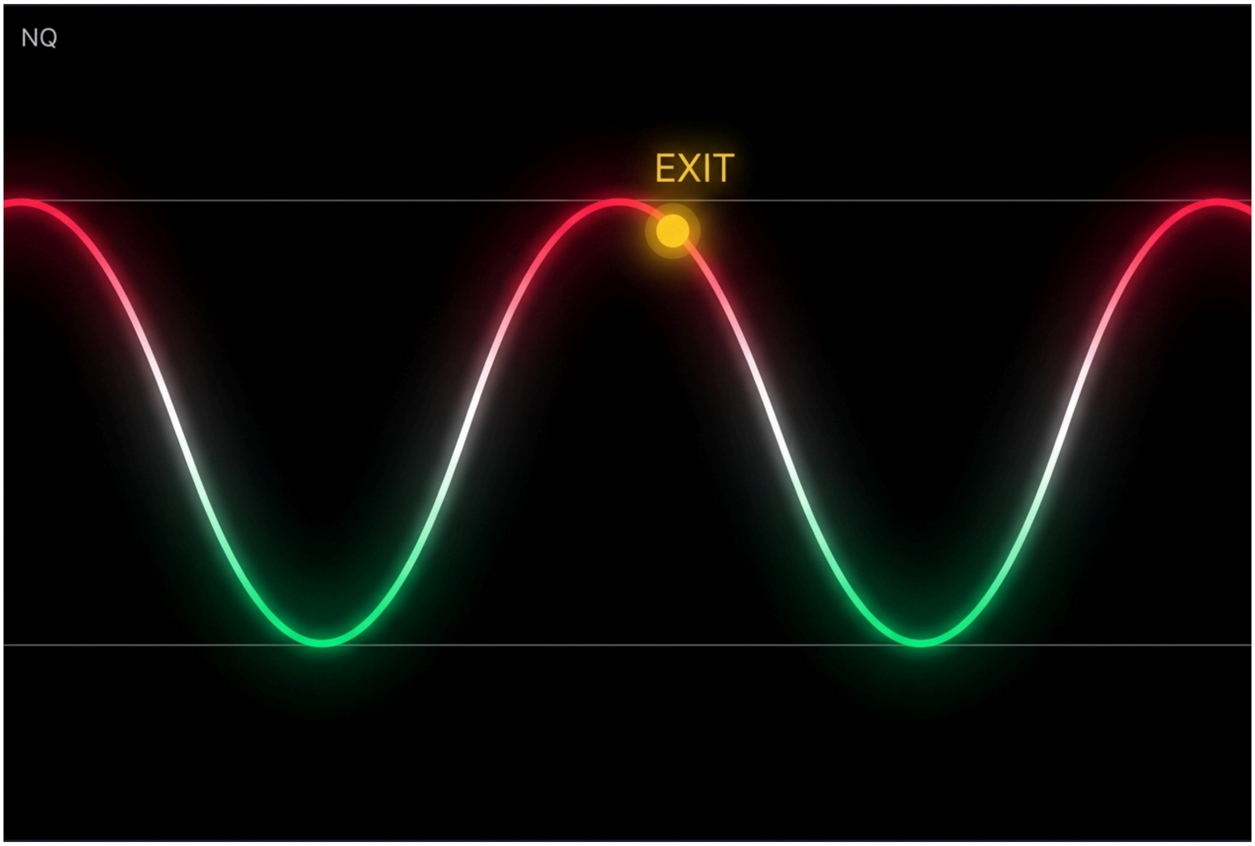
Good news: Ways 1 through 5 are **all already ON.** You don't have to turn anything on to start.

THE HELPERS (extra things on your chart that help you win)

These are not trades by themselves. They are helpers that make your trades better. They're already on. Here's what each one means when you see it:

You see	What it is	How it helps
🟡 **Yellow Man**	a yellow candle	warning: the trend may flip. Get ready.
🧭 **LEAN LONG / SHORT**	the day's lean	if no big GO fired yet, this is the day's bias. Context only, smaller size.
📊 **VWAP** (yellow line)	the day's fair price	buy above it, sell below it. A magnet and a target.
🏄 **8 EMA line** (thin)	your "stay in" line	while price holds it, stay in. When a candle closes through it, get out.
🛡️ **Green line** (Support)	a floor price	price often bounces up off it. Take profit into it on a short.
🧱 **Red line** (Resistance)	a ceiling price	price often drops off it. Take profit into it on a long.
🟥 **Supply/Demand box**	where big money sits	buy at a demand box, sell at a supply box. The tool only shows the one that goes with the trend.
🎯 **Shaded band**	the pullback get-in zone	shows exactly where to wait for your dip entry.

> **Simple way to use them:** the Ways tell you WHEN to get in. The helpers tell you WHERE the good and bad spots are. Use them together: take your GET-IN box or dip **at** support/demand/VWAP, and **take profit into** the next resistance or supply.



THE OSOB — YOUR “GET OUT” TOOL

You get **two** tools. The first one tells you when to **get in.** The OSOB tells you when to **get out.** That’s its only job.

> **OSOB just means: is it too high or too low?** It shows when a move is getting tired, so you can grab your money before it turns around.

HOW TO ADD IT

The OSOB goes in a **box under your chart** — not on top of the candles.

1. Add the **”Green Light Special — OSOB”** tool in TradingView.
2. It opens in its own box below the price. That’s where it goes.
3. Now you see your GET IN tool on top and your GET OUT tool on the bottom.

HOW TO READ IT

You see	It means	You do
○ **White line moving**	move is healthy	**hold, do nothing**
🔴 **Line turns red at the top**	a buy is getting tired	get ready to take some money
🟢 **Line turns green at the bottom**	a sell is getting tired	get ready to take some money
🟡 **GOLD dot**	it's turning around now	**take some money. Move your stop up.**

The gold dot is the star. When you see the gold dot, the move is running out of gas. Grab some of your money. Don't panic and sell it all — just take your first bit and lock it in.

⚠️ THE ONE RULE

Only use the OSOB to GET OUT. Never use it to get in. Never bet against the trend with it.

Why? In a strong trend, this tool will say "too high" while price keeps going up and up. If you sell there, the trend runs you over. So:

- ✅ Use it to take profit on a trade you're already in.
- ❌ Don't use it to start a trade.
- ❌ Don't sell just because it says "too high."

HOW TO USE BOTH TOOLS TO MAKE MONEY

Here is a real trade, step by step. This is how the two tools make money together. Your screen has the main tool on top and the OSOB on the bottom.

1. **9:45.** The 4 clocks all say UP. It's a buy day. *(The OSOB is quiet. You're not in a trade yet.)*
2. **9:52.** The top tool says 🔔 **OPENING GO — BUY.** It draws your stop line.
3. **You buy.** Stop goes on the dotted line. You risk a small set amount.
4. **10:10.** Price is going up. You're holding, watching your dotted stop. Down below, the OSOB line is climbing. *You do nothing. Climbing is good.*
5. **10:24.** The OSOB line hits the top and a 🟡 **GOLD DOT** shows up. **Time to grab money.** You **sell half.** That money is now yours to keep.
6. **You move your stop to where you got in.** Now you're **playing with house money** — your first half is locked in, and the rest is aiming for break-even or better.

7. **10:40.** Price keeps running. You let the other half run and trail it with the 🏄 8-EMA line.
8. **11:05.** A second gold dot shows up. You sell the rest. **Done.**
9. **You hit your money goal for the day.** Banner says **STAND DOWN.** You close the laptop. **You won today.**

> **The big idea:** the top tool got you IN on the real move. The bottom tool told you when to TAKE YOUR MONEY. One without the other is not enough. **Together, they are how you win.**

Say it simple: *Get in when the top says GO. Take money when the bottom shows the gold dot. Let the rest run. Stop when you hit your goal.*

HOW TO MANAGE A TRADE (after you're in)

The tool does most of this for you, but here's what the lines mean:

- **First target:** the first 🎯 line (traders call it "TP1" — just take-profit number one). When price hits it, **take half** and slide your stop to where you got in. Now the trade is safe.
- **Final target (the runner):** the far 🎯 line. Let the rest ride to here, or trail it with the trend.
- **The trail:** the tool moves your stop up behind price for you, so you keep more of a big win.
- **"OUT 🔄 " (flip exit):** if the trend flips against you, the tool says get OUT. The trade is over. **Don't jump back in the same way** — wait for a fresh signal.

The habit that makes the money: take a little at the first target, then let the rest run far. Small sure wins + one big runner = a green day.

THE MONEY RULES (this keeps you from going broke)

Good trades still lose money if you break these. The tool does them for you:

THE FIREWALL (TURN IT ON)

- **Lose $500 in a day → the tool shuts you off.** No more trading. No revenge.
- **Make $200 in a day → it says DONE.** Walk away a winner.
- Each trade risks a small, set amount (like $250). The tool sets your stop for you.

THE 3 HABITS THAT MAKE THE MONEY

1. **No trade is fine.** If the screen is quiet, don't trade. A quiet day beats a bad day.
2. **Small losses, big wins.** When the banner says RUNNER, let it run. This is the whole game.
3. **Stop when you're up.** Hit your goal? Close the laptop. Come back tomorrow.

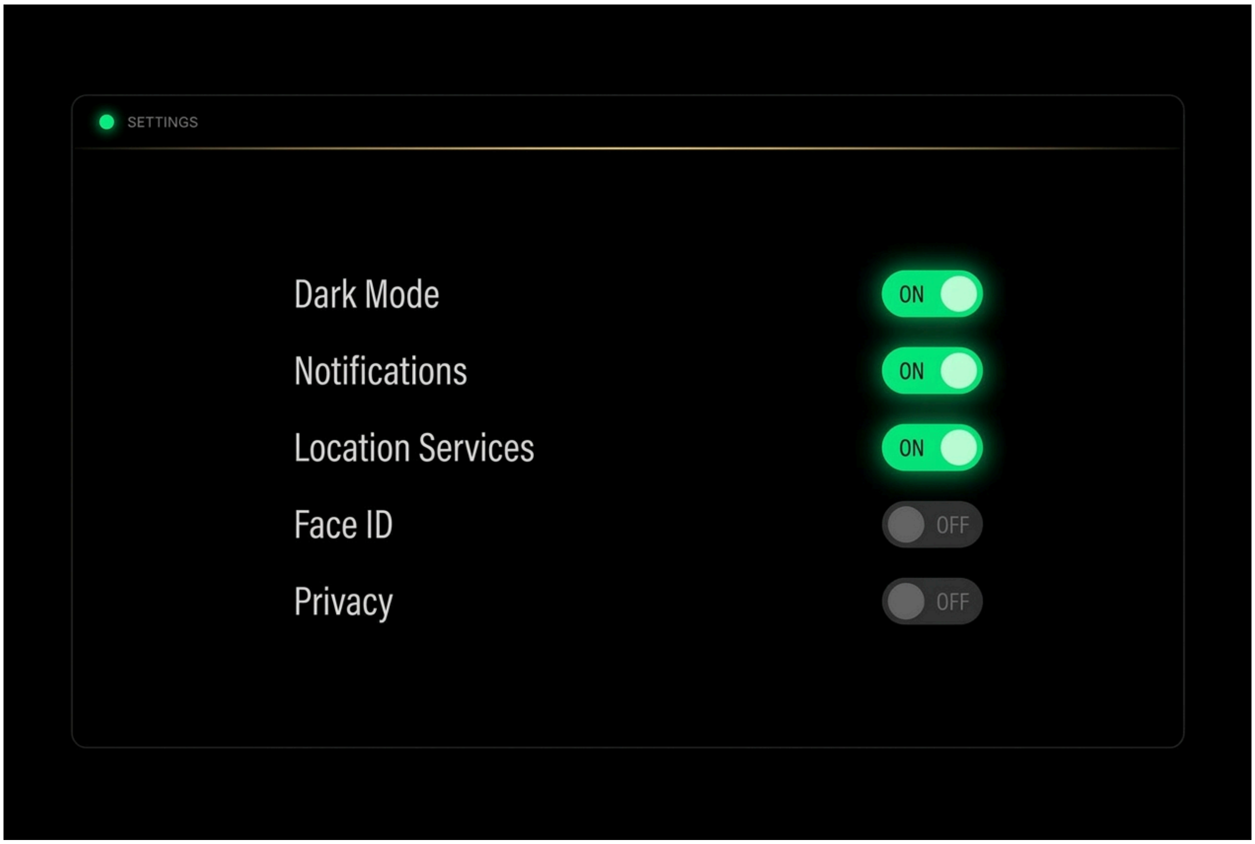
THE TOP WAYS TO WIN (the big ones)

If you only remember a few things, remember these. These are what make the money:

1. **Trade the open.** The first 90 minutes is the best time. Catch the 🔔 **OPENING GO** on the **15-minute chart.** That one trade can make your day.
2. **Only trade when all 4 clocks agree.** All up = buy. All down = sell. Mixed = wait. This alone saves your account.
3. **Trade futures.** ES, NQ, YM, or Gold. Real volume = clean signals.
4. **Two charts, two jobs. 15-minute** for the opening trade. **5-minute** for the all-day scalper and dips.
5. **Take half at the first target (or the gold dot). Let the rest run.** Lock in money early, then ride the winner with the trend.
6. **Small losses, big wins.** Cut losers fast. When it says RUNNER, let it run far.
7. **No trade beats a bad trade.** If the screen is quiet, don't force it. Wait for the green light.

8. **Stop when you hit your goal.** Made your money for the day? Close the laptop. Come back tomorrow.
9. **One market. One way.** Get great at ONE thing before you add more.

> **The simplest winning plan there is:** trade the open on the **15-minute chart**, only when the clocks agree, take half at the first target, ride the rest, and stop when you're up. Do that over and over.



YOUR SETTINGS (what to turn on)

The tool has lots of switches. **You only touch a few.** Set these and leave the rest alone.

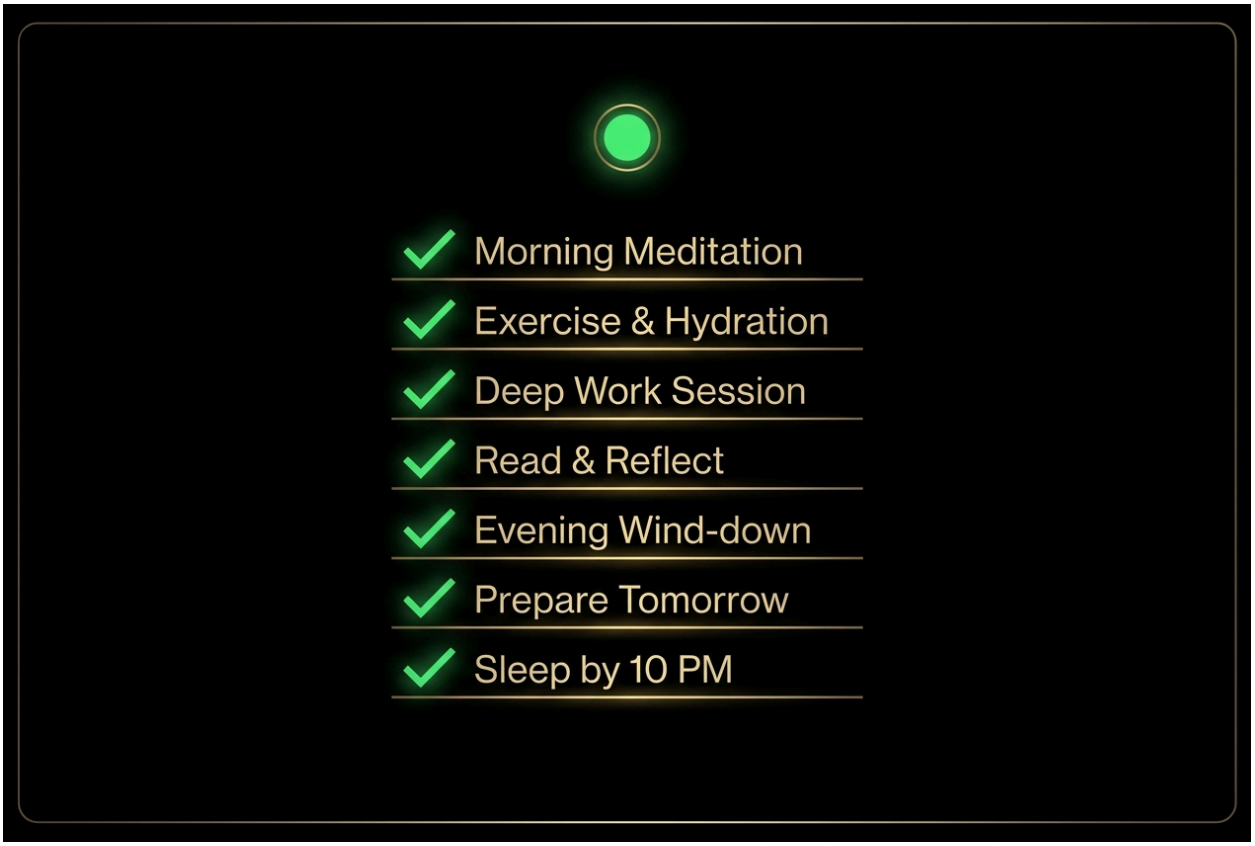
Setting	Set it to	What it means
Trading Style	Day Trading	in and out, same day
Opening chart	15-minute	to catch the opening trade
All-day chart	5-minute	for the scalper and dips
Firewall	ON	protects your account
Lose limit	$500	it shuts you off if you lose this much
Money goal	$200	it says DONE when you make this much
Scalper	ON	Way 2, already on
Strong-trend only	ON	fewer, cleaner trades
Scalp with intraday trend	OFF	makes the clocks really agree
Max range height	change 4 → 2	it ships at 4. Change it to 2 = “only tight, clean squeezes.” Smaller = pickier.
Opening	ON	Way 1, already on

THE SWITCHES YOU CAN LEAVE ALONE

These are extra tools, most are **off** to start. You don’t need them. But so nothing is a mystery:

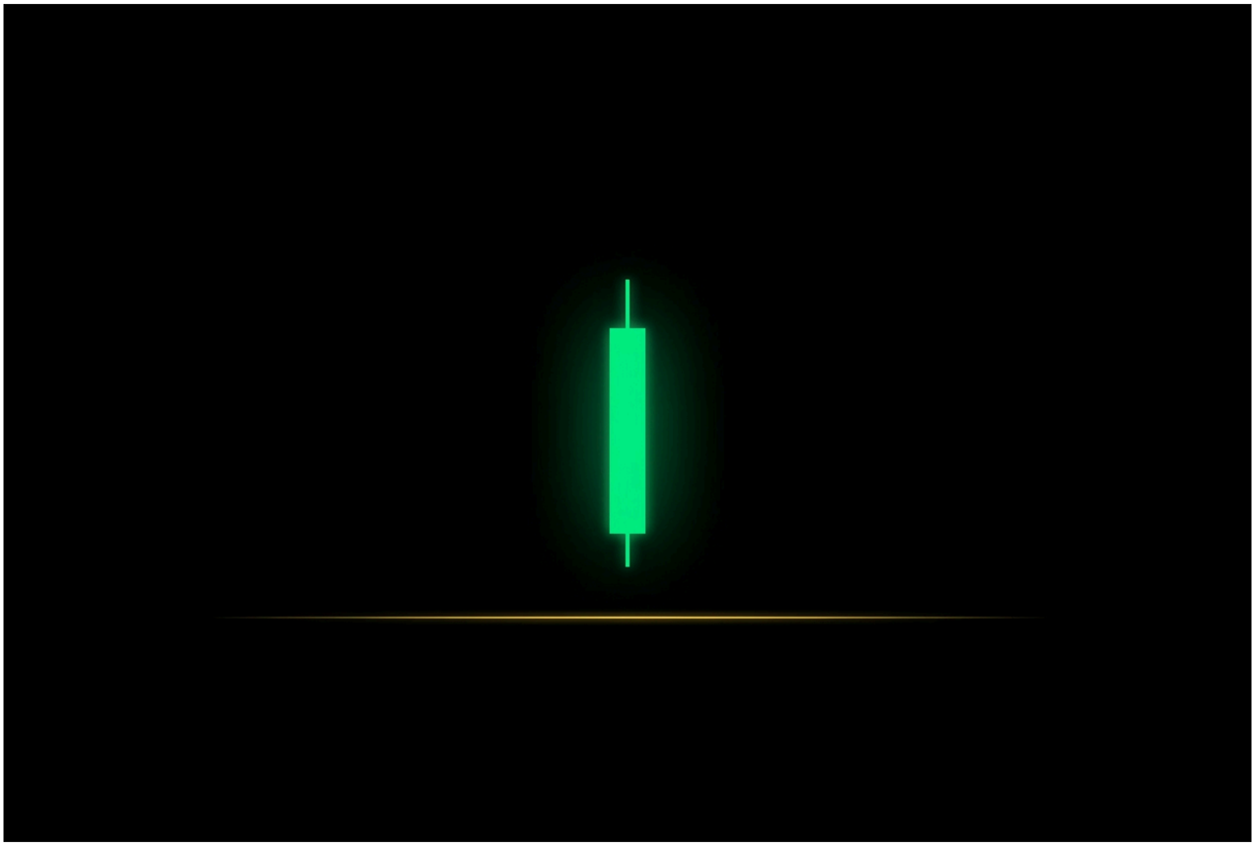
- 🎯 **Sniper** — an extra advanced entry. Leave it **OFF** until you’re experienced.
- 🔶 **Level Regain** — marks failed breaks that snap back. Off. Advanced.
- 🔄 **Smart Reversal** — marks tired moves at big levels (for exits). Off. Advanced.
- 🏛 **BOS / CHoCH** — marks when the trend structure breaks. Off. Advanced.
- 💧 **Liquidity lines** — shows yesterday’s high/low (where stops sit). Turn on if you like targets.
- 📐 **Discount/Premium** — colors the cheap half vs the pricey half. Off. Optional.

> **Simple rule:** if you don't know what a switch does, leave it alone. The tool already set it right. The only ones you'll ever change are **Trading Style, the two charts, the dollar amounts, and Max range height.**



YOUR DAILY PLAN (print this, tape it to your screen)

1. ☀️ Open your chart. Start on the **15-minute** for the opening trade. Day Trading style.
2. 👀 Look at the 4 clocks. All up? All down? Or mixed (skip it)?
3. ✋ **9:30 to 9:45** → don't touch anything. Just watch.
4. 🔔 Wait for **OPENING GO** → take it. Stop on the dotted line.
5. 🔄 After the open, **switch to the 5-minute** for the rest of the day.
6. 🧱 Take the scalper, get-in boxes, and dip trades. Only with the trend.
7. 🟡 See the **gold dot** on the bottom tool → take some money.
8. 🚀 Banner says **RUNNER** → let it run. Banner says **STAND DOWN** → you're done.
9. 💰 Hit your goal → close the laptop. **Win the day.**



THE MINDSET (the part that matters most)

- **You will lose some trades. That’s normal.** You win by keeping losses small and letting wins grow.
- **A quiet screen is not broken.** It’s keeping you safe. The best traders wait a lot.
- **Boring and steady beats exciting and broke.** Every time.

Trade the plan. Let the tool do the hard part. Win your days.

Welcome to The Green Light Special. 🟢

Real talk: trading can lose money. This tool does not promise wins or profit. It is built on solid market ideas, but no exact setup is promised to make money. Practice on fake money or small size first. Never trade money you can’t lose. This is teaching, not money advice.
